Practice with Scatter Plots

Classify the scatter plots as having a positive, negative, or no correlation.

1.

2.

3.

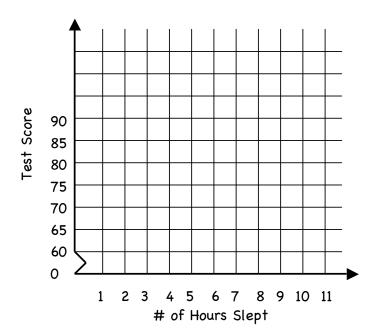

5.

6.

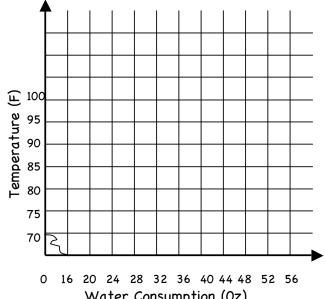

7. A history teacher asked her students how many hours of sleep they had the night before a test. The data below shows the number of hours the student slept and their score on the exam. Plot the data on a scatter plot.

Hours Slept	8	7	7	8	6	5	7	4	9	7
Test Score	83	86	74	88	76	63	90	60	89	81

8. Assume that during a three-hour period spent outside, a person recorded the temperature and their water consumption. The experiment was conducted on 7 randomly selected days during the summer. The data is shown in the table

below.					
Day	Temp-	Water			
	erature	Consumption			
	(F)	(oz)			
1	99	48			
2	85	27			
3	97	48			
4	75	16			
5	92	32			
6	85	25			
7	83	20			

Water Consumption (Oz)

Create a scatter plot with the data. What is the correlation of this scatter plot? (Hint: Do not use the day on the scatter plot.)

Identify the data sets as having a positive, a negative, or no correlation.

- 8. The number of hours a person has driven and the number of miles driven
- 9. The number of siblings a student has and the grade they have in math class
- 10. The age of a car and the value of the car
- 11. The number of weeks a CD has been out and the total sales
- 12. The number of years a person went to school and their income
- 13. The number of songs downloaded on your i-pod and the amount of memory available
- 14. The amount of time spent on the computer instant messaging your friends and the number of computers in your house
- 15. The age of a house and the number of people living in the house
