

Solving Challenge. :)

Date _____

Solve each equation.

1) $5(b - 5) = -7 + 8b$

2) $5 \cdot 16^{4-8r} = 14$

3) $8m - 12 = 2(1 + 5m)$

4) $v^2 = -8 - 6v$

5) $-5 \log_5 (5 - 2b) = -10$

6) $-5(x + 1) = -5 - 5x$

$$7) 7 + n = 3(n + 7)$$

$$8) -1 + 7 \log_9 k = 6$$

$$9) -2 \cdot 4^{10x} = -98$$

$$10) n^2 - 11 = -2$$

$$11) 8 - 5r = 4(4r + 2) - 2r$$

$$12) -7 \cdot 2^{x-1.5} = -22$$

$$13) -8 \log_2 -9m = 8$$

$$14) -6(-2a + 5) = 5a - 2$$

$$15) 9 \log_2 -8p + 6 = 6$$

$$16) a^2 - 10a + 21 = 0$$

$$17) 6 - 5k = 6(1 + 7k)$$

$$18) 2 \cdot 3^{r+8} - 5 = 94$$

$$19) -6 + 2a = -8(a - 8)$$

$$20) -4r^2 - 13r - 11 = -8r - 5r^2 + 3$$
